TECHNICAL SKILLS

- GenAI / LLM
- Claude APILLM Orchestration
- Multi-Agent Systems
- Prompt Eng (CoT, Few-Shot)Tool Use
- RAGEmbeddingsNL-to-SQL
- Autonomous AgentsAgentic Planning
- AI/ML & CV
- PyTorchTensorFlowScikit-learn
- OpenCVGANsObject Detection
- SegmentationOCRNLP
- Data & Cloud
- TeradataBigQueryPostgreSQL
- DuckDBPineconeChromaDB
- GCPAWSDockerCI/CD
- Programming
- PythonDjangoFlaskFastAPI
- REST APIsStreamlitBash
- Leadership
- Team Mgmt (15+)Sprint Planning
- Exec ReportingAgile/Scrum
- Product RoadmapPerf Reviews

EDUCATION

- BTech in Computer Science
- Presidency University
- 2015 - 2019 | Bangalore, India

LANGUAGES

- English (Professional)Telugu (Native)
- Hindi (Working)Kannada (Elementary)

CERTIFICATIONS

- Star of Month & Qtr - L&T (2023)
- Python Expert L5 - HackerRank
- Data Science - IBM

INTERESTS

- GenAI / LLM AgentsAI Products
- Computer VisionR&DADAS

PROFESSIONAL SUMMARY

AI/GenAI engineering leader with 7 years of experience building production AI systems for Fortune 500 companies. Currently building multi-agent LLM platforms at Verizon using Claude API, including autonomous research agents, NL-to-SQL pipelines, RAG systems, and executive analytics dashboards that cut reporting cycles from days to minutes. Previously led 15+ engineers shipping enterprise computer vision products across automotive, medical, and robotics clients in Europe and the Americas.

IMPACT HIGHLIGHTS

- 90% faster reporting • 8 agents in prod • 15+ engineers led • 500K+ annotations/mo •
- 40% MTTR reduction

PROFESSIONAL EXPERIENCE

- Verizon
- Hyderabad
- 10/2024 - Present
- Consultant - AI / GenAI | Business Transformation (CFO Org)
- Built BT OneView, a multi-agent GenAI analytics platform on GCP using Claude Opus/Sonnet API. The system handles sequential agent orchestration, tool-use routing, and structured output parsing, and brought executive business case reviews down from 3+ days to under 2 hours.
 - Designed NL-to-SQL pipelines that let non-technical stakeholders query Teradata and BigQuery directly in plain English across 50M+ row datasets. No engineering support needed.
 - Engineered 8 autonomous overnight research agents that query Teradata on their own, synthesize findings, and generate branded PDF/PPT reports by morning. Includes retry logic, error recovery, and supervisor-level quality checks. Freed up 20+ hours/week of analyst time.
 - Built a production RAG system using Pinecone and ChromaDB with hybrid search (vector + keyword), chunk optimization, re-ranking, and hallucination guardrails. Hitting 92%+ retrieval accuracy with source attribution.
 - Set up auto-triage and auto-notification workflows where multiple LLM agents handle incident classification, routing, and stakeholder alerting. Cut MTTR by 40%.
 - Created 8 Streamlit dashboards with 3-tier DuckDB caching for C-suite reporting. Used across 500+ enterprise users.
 - Built branded PPT and PDF generation pipelines (python-pptx, ReportLab) that convert agent analysis into executive-ready decks matching Verizon design standards.
 - Worked directly with CFO org leadership on weekly AI strategy reviews, presenting ROI metrics, defining automation roadmaps, and influencing investment priorities across product, data engineering, and finance teams.

- L&T Technology Services
- Hyderabad
- 02/2022 - 09/2024
- Senior Engineer - Transportation Solutions (Tech Lead)
- Took AnnotAI from concept to production. It's now a computer vision annotation platform serving 200+ daily users across 8 enterprise clients in Europe and the Americas, handling 500K+ annotations per month.
 - Architected the backend on Django and Docker with PyTorch/TensorFlow inference pipelines. Sub-200ms latency, 99.5% uptime across multiple regions.
 - Managed a team of 15+ CV/ML engineers and data scientists. Set up sprint cadences, code review standards, CI/CD pipelines, and built a culture where people took ownership of what they shipped.
 - Used GANs and transfer learning to make the annotation pipeline smarter. Improved precision by 15% and cut manual annotation work by 30%.
 - Presented quarterly product roadmaps to CTOs and engineering VPs at automotive, medical imaging, and robotics clients.
 - Ran performance reviews and set individual objectives. Awarded Star of the Month & Quarter (Aug-Nov 2023).

- EverestDX Inc.
- Hyderabad
- 04/2021 - 01/2022
- Senior Engineer - Digital Platforms
- Built an AI-powered anomaly detection platform for cloud infrastructure using Python, Pandas, and Scikit-learn. Reduced false-positive alerts by 25%.
 - Collaborated with US-based operations teams to create interactive dashboards and service dependency maps covering 100+ cloud services.
 - Automated weekly executive reporting, saving the team about 10 hours/week of manual work.

- Zen3 Info Solutions (Now Tech Mahindra)
- Hyderabad
- 08/2019 - 03/2021
- Software Engineer - AI Platforms
- Built DATAMIME, a computer vision data collection tool used in 50+ campaigns for automotive clients across Europe and the Americas.
 - Developed REST APIs, trained OCR and object detection models, and plugged everything into the existing enterprise data platform.
 - Created NLP evaluation pipelines to benchmark in-house speech models against Microsoft LUIS.

KEY PROJECTS

BT OneView - Multi-Agent GenAI Platform (Verizon) [Claude API, Teradata, BigQuery, DuckDB, Pinecone, Streamlit]

Started as a 2-person MVP built in under 7 days, then grew into 8 dashboards, an AI Analyst, Live Query, 8 overnight agents, and branded report generation. Replaced a 5-7 day reporting cycle with real-time insights.

War Room - Multi-Agent Debate System (Verizon) [Claude API, DuckDB, Multi-Agent Orchestration]

18 AI personas debating across 5 strategic topics. Hierarchical architecture: topic moderators, domain experts, devil's advocate challengers, and a supervisor enforcing structured argumentation. Pulls real data from DuckDB.

AnnotAI - CV Annotation Platform (L&T) [PyTorch, TensorFlow, Django, Docker, GANs]

Built from scratch into an enterprise PaaS serving 8+ clients. GAN-based optimization, sub-200ms inference, multi-region deployment.

DATAMIME - CV Data Collection (Zen3) [Python, OpenCV, REST APIs, OCR]

Data collection platform for ML-compatible datasets. OCR training and object detection deployment for automotive safety and ADAS clients.
